Appendix	22

1. Prerequisites

1.1. Preparing a Dedicated URL

You may prepare the dedicated URL with either AWS Route 53 or other domain providers, e.g., GoDaddy, etc.

NOTE: If you already have a domain registered or hosted on Route 53, you can use the existing domain and skip the **Domain Settings** steps and proceed directly to [Purchase Procedure](#).

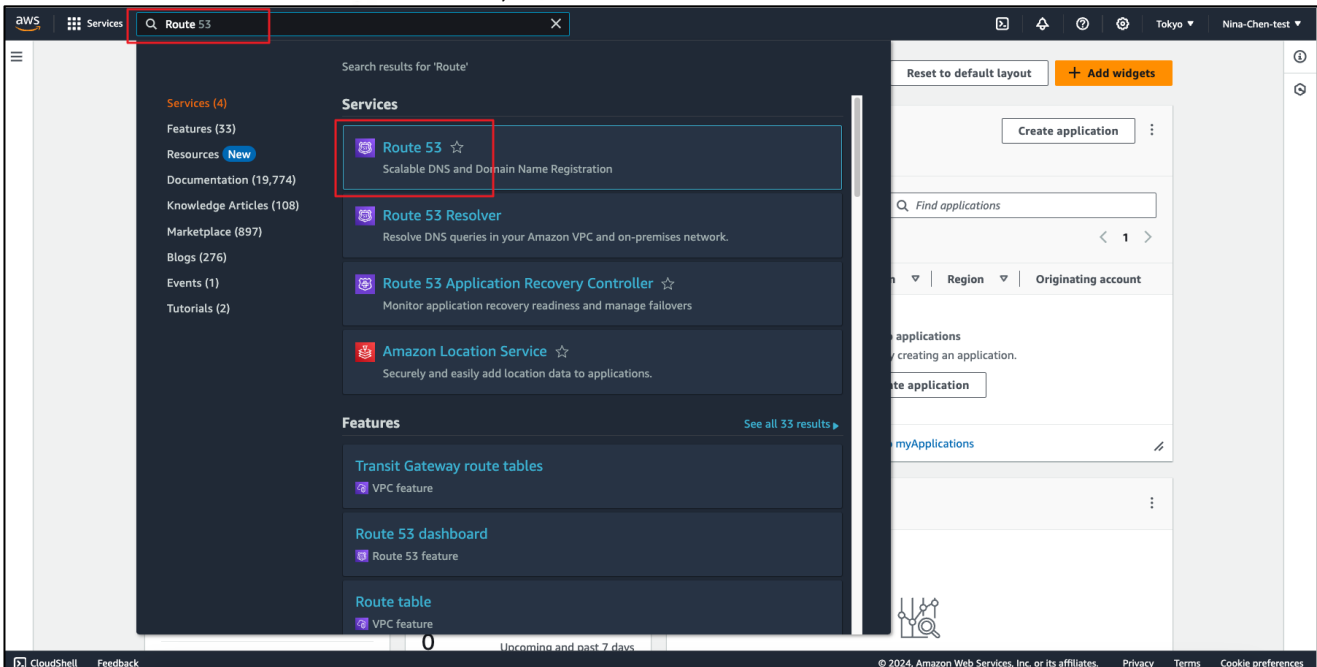

1.2. Domain Settings - with AWS Route 53

1. Go to the AWS website, and click on **Sign in** to access the AWS Management Console.

NOTE: If you do not have an AWS account, click on **Create an AWS Account** to register first.

2. Search for the Route 53 service, and click to access it.

3. Click on **Register domain** to purchase and register the domain, and AWS will automatically complete the required settings.

Route 53 > Dashboard

Route 53 Dashboard Info

DNS management

1
Hosted zone

Traffic management

A visual tool that lets you easily create policies for multiple endpoints in complex configurations.

[Create policy](#)

Availability monitoring

Health checks monitor your applications and web resources, and direct DNS queries to healthy resources.

[Create health check](#)

Domain registration

A domain is the name, such as example.com, that your users use to access your application.

[Register domain](#)

Register domain

Find and register an available domain, or [transfer your existing domains](#) to Route 53.

Each label (each part between dots) can be up to 63 characters long and must start with a-z or 0-9. Maximum length: 255 characters, including dots. Valid characters: a-z, 0-9, and - (hyphen)

[Check](#)

1.3. Domain Settings - with Third-Party Domain Providers

Purchase the domain from other domain providers, e.g., GoDaddy, etc., and follow the instructions below to complete the domain settings.

1. Go to the AWS website, navigate to the Route 53 service, and create a hosted zone.

Route 53 > Hosted zones > digirunner.click

Public digirunner.click Info ← **Your domain name**

[Delete zone](#) [Test record](#) [Configure query logging](#)

▶ **Hosted zone details** [Edit hosted zone](#)

[Records \(21\)](#) | [DNSSEC signing](#) | [Hosted zone tags \(0\)](#)

Records (21) Info

Automatic mode is the current search behavior optimized for best filter results. [To change modes go to settings.](#)

[Refresh](#) [Delete record](#) [Import zone file](#) [Create record](#)

[Type](#) ▼ [Routing pol...](#) ▼ [Alias](#) ▼ < 1 > [Settings](#)

<input type="checkbox"/>	Record name ▼	Type ▼	Routin... ▼	Differ... ▼	Alias ▼	Value/Route traffic to ▼	TTL (s... ▼	Health
<input type="checkbox"/>	digirunner.click	NS	Simple	-	No	ns-357.awsdns-44.com. ns-574.awsdns-07.net. ns-1152.awsdns-16.org. ns-2038.awsdns-62.co.uk.	172800	-

2. Access your domain provider's platform (e.g., GoDaddy), set the URL to self-managed, and point it to AWS: ensure it corresponds to the four sets of Values in the Record Type="NS" in the Hosted Zone of Route 53.
3. To query the corresponding IP address, please follow the instructions below:
 - a. Open the Terminal or Command Prompt, type in 'nslookup', and press **Enter**.
 - b. Copy and paste the four groups of NS values and press **Enter** to view the corresponding IP address.

```
~
nslookup ← Type in the command in the Terminal.

2. Purchase Procedure

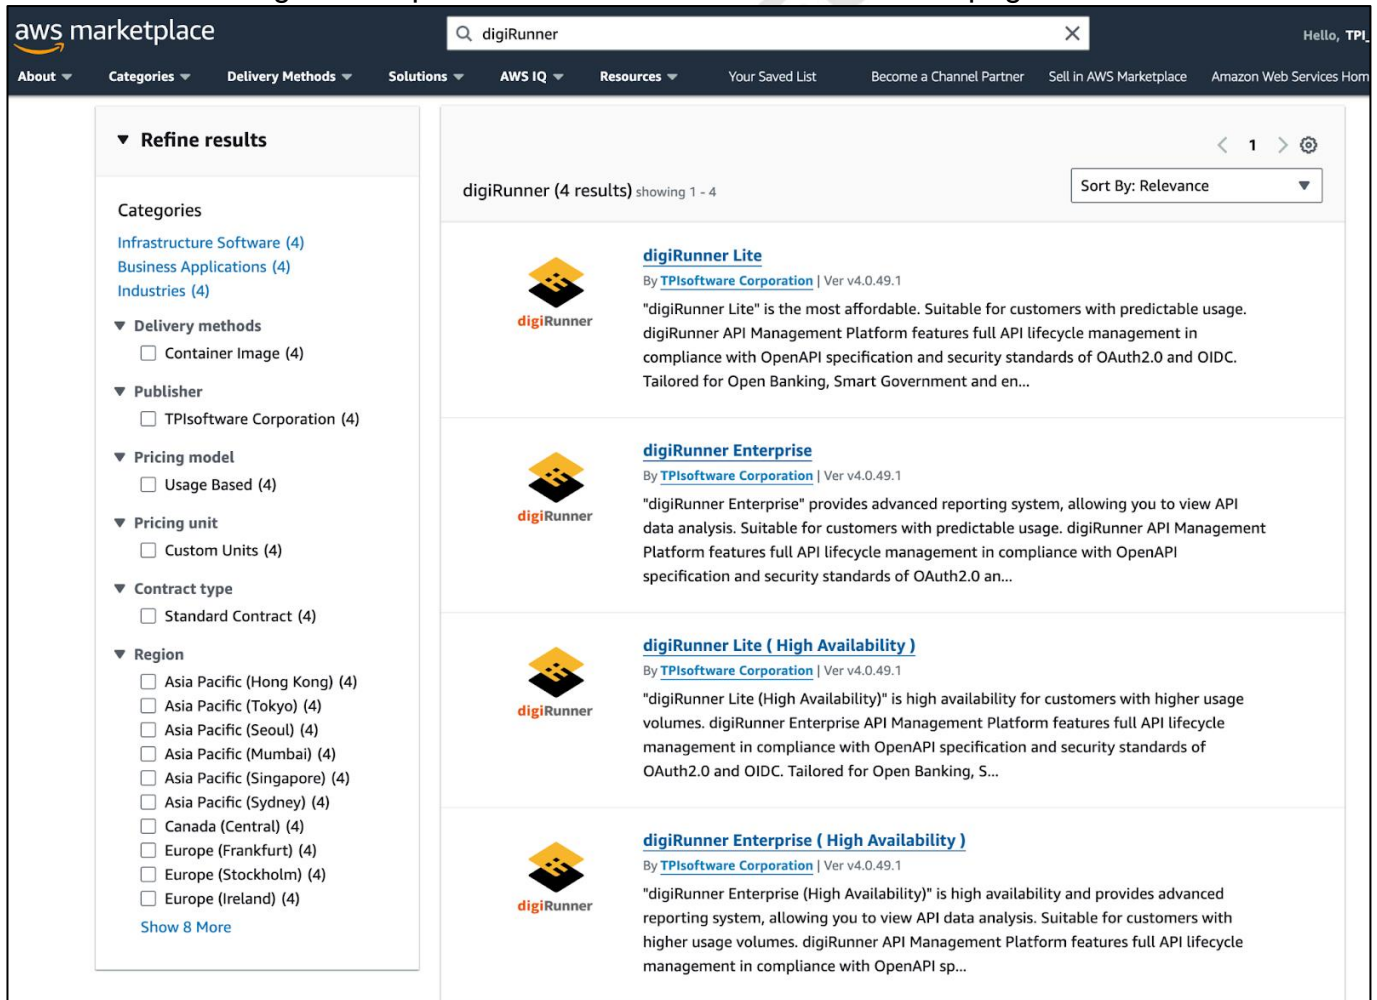

2.1. Searching for digiRunner

1. Access the AWS Marketplace at: <https://aws.amazon.com/marketplace>
2. Enter **digiRunner** in the keyword search field to search for it.

2.2. Search Results for digiRunner

You will find four digiRunner product solutions on the search results page.

2.3. digiRunner Products: Four Solutions Available

Comparison of Solutions:

Solutions	Container Auto Scaling & High Availability	OpenSearch Detailed Reporting	Buyer Guide
digiRunner Lite	X	X	Affordable
digiRunner Lite (High Availability)	O	X	Moderate cost, high availability
digiRunner Enterprise	X	O	Moderate cost, detailed reporting
digiRunner Enterprise (High Availability)	O	O	High cost, high availability and detailed reporting

				
Resource	Lite	Lite (High Availability)	Enterprise	Enterprise (High Availability)
CloudWatch	●	●	●	●
ALB	●	●	●	●
VPC (NAT Gateway)	●	●	●	●
Router 53	●	●	●	●
CloudMap	●	●	●	●

System Manager	●	●	●	●
ECS Fargate	●	●	●	●
ECS Fargate (Master)		●		●
OpenSearch			●	●

2.4. Subscribing to Products

Select one of the digiRunner product solutions and click on **Continue to Subscribe** to complete your subscription.

The screenshot shows the AWS Marketplace product page for digiRunner Lite. The page includes a search bar, navigation menu, and product details. A red arrow points to the 'Continue to Subscribe' button, which is highlighted with a red box. Below the product name, there is a 'Save to List' button. The product description states: 'The Enterprise API Management Platform digiRunner features full lifecycle API management in compliance with OpenAPI specification and security standards of OAuth2.0 and OIDC. It Linux/Unix'. The 'Product Overview' section describes the platform's features and highlights, such as being a cloud-based API management platform with one-click installation and the ability to convert diverse formats into RESTful APIs.

2.5. Configuring Products

Click on **Continue to Configuration** to start configuring your product.

The screenshot shows the AWS Marketplace product page for digiRunner Lite, specifically the 'Subscribe to this software' section. A red arrow points to the 'Continue to Configuration' button, which is highlighted with a red box. The page includes a navigation menu, product details, and terms and conditions. The 'Terms and Conditions' section states: 'TPIsoftware Corporation Offer 2024-02-01. You have subscribed to this software and agreed that your use of this software is subject to the pricing terms and the seller's End User License Agreement (EULA). You agreed that AWS may share information about this transaction (including your payment terms) with the respective seller, reseller or underlying provider, as applicable, in accordance with the AWS Privacy Notice. AWS will issue invoices and collect payments from you on behalf of the seller through your AWS account. Your use of AWS services remains subject to the AWS Customer Agreement or other agreement with AWS governing your use of such services.' Below the text is a table with columns for Product, Effective date, Expiration date, and Action.

Product	Effective date	Expiration date	Action
digiRunner Lite	2/2/2024	N/A	Show Details

2.6. Launching Products

Click on **Continue to Launch** to initiate the launch process for your product.

The screenshot shows the AWS Marketplace interface for 'digiRunner Lite'. At the top, there is a search bar and navigation links. Below the product name, there are links for 'Product Detail', 'Subscribe', and 'Configure'. The main heading is 'Configure this software'. Below this, there is a prompt: 'Choose a fulfillment option and software version to launch this software.' There are two dropdown menus: 'Fulfillment option' set to 'v4.0.49.1' and 'Software version' set to 'v4.0.49.1 (Feb 02, 2024)'. To the right, there is a 'Supported services' section listing 'Amazon ECS' and a 'Fulfillment option description' section. A red arrow points to a yellow 'Continue to Launch' button in the top right corner, which is also enclosed in a red rectangular box.

2.7. Accessing Installation

Click on **Install URL** to access the installation URL and proceed to the next step for installation.

The screenshot shows the AWS Marketplace interface for 'digiRunner Lite' at the 'Launch' stage. The main heading is 'Launch this software'. Below this, there is a prompt: 'Review the launch configuration details and follow the instructions to launch this software.' There is a 'Configuration details' section with a table:

Fulfillment option	v4.0.49.1
Software version	v4.0.49.1
Supported services	Amazon ECS

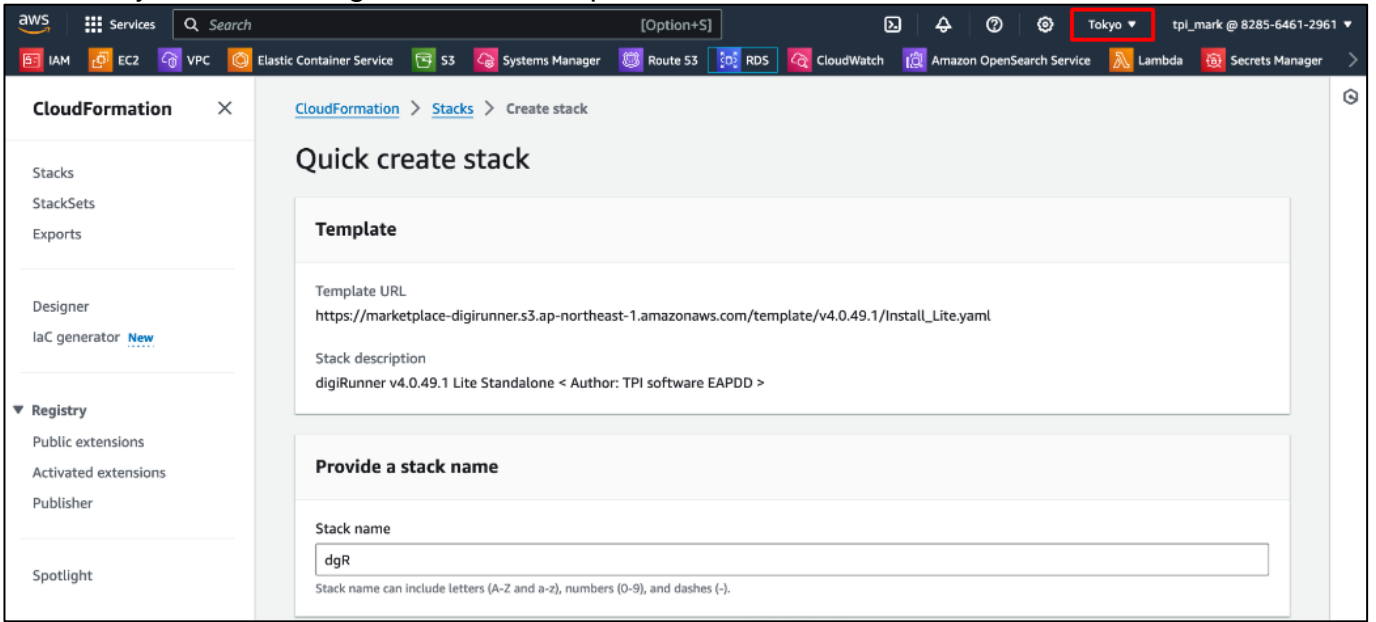

Below the table is a 'Usage instructions' button. Further down is a 'Deployment template' section with the text: 'Choose a deployment template from the following list to launch this software. Deployment templates are seller-provided links to instructions and information about launching and using this software.' At the bottom of this section, the 'Install URL' link is highlighted with a red rectangular box.

3. digiRunner Installation and Setup

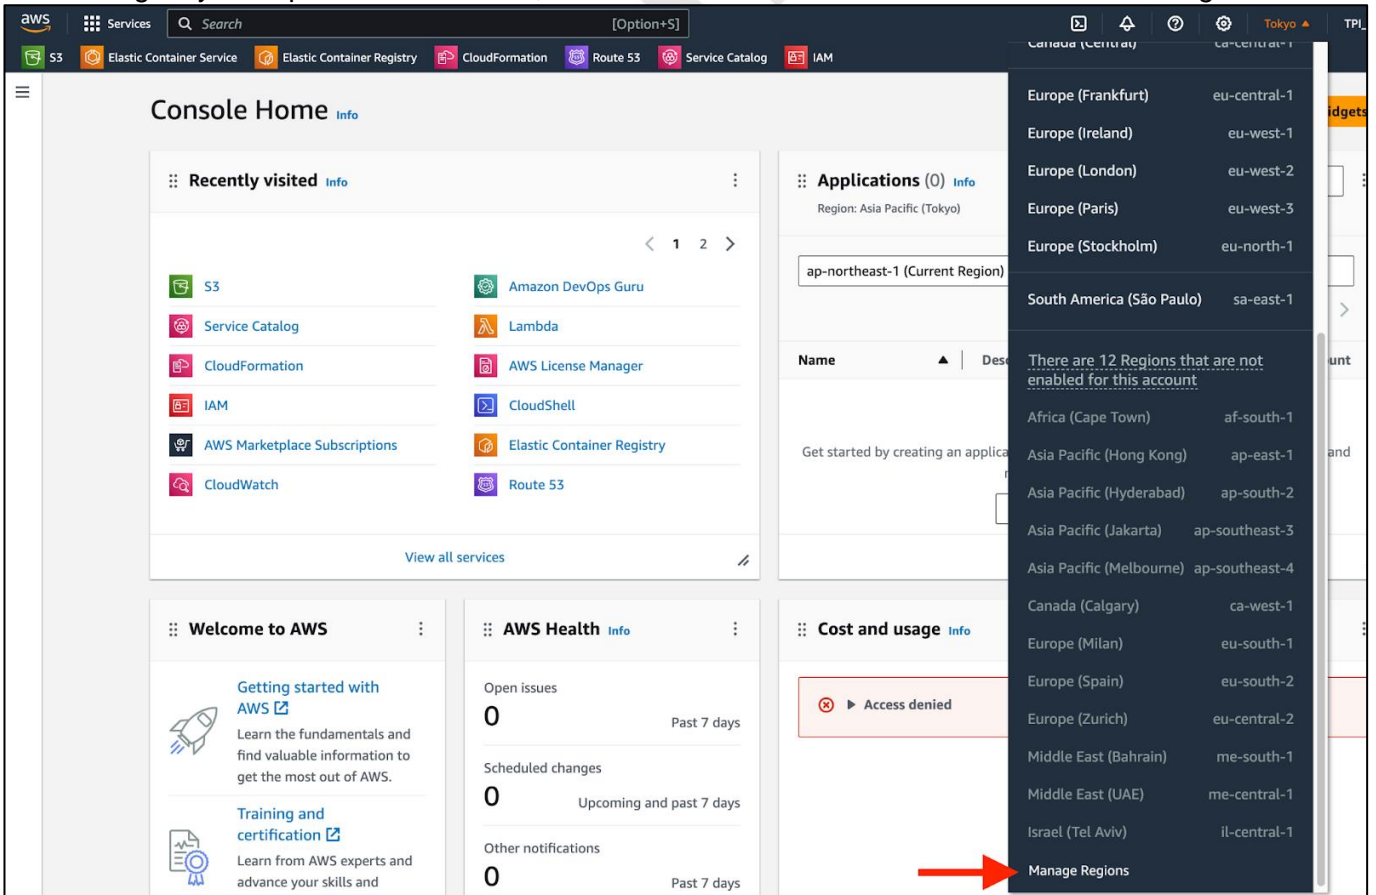

3.1. Region Setup

The default region is **Tokyo** (ap-northeast-1).

1. Select your desired region from the drop-down menu to customize it.

2. If the region you require is not enabled, follow instructions below to enable the desired region.

AWS Regions Info Disable Enable ↻

Region	Status
<input type="checkbox"/> Africa (Cape Town)	⊗ Disabled
<input checked="" type="checkbox"/> Asia Pacific (Hong Kong)	⊗ Disabled
<input type="checkbox"/> Asia Pacific (Hyderabad)	⊗ Disabled
<input checked="" type="checkbox"/> Asia Pacific (Jakarta)	⊗ Disabled

TPI SOFTWARE

3.2. Installation Parameters

You may use the default installation parameters provided to configure the product.

NOTE: Conflicts may arise if your AWS network environment conflicts with the defaults, and the possible causes of conflict are as below.

1. **VPC quota limit:** Ensure that your resource usage remains within the VPC quota limit. Refer to the [AWS documentation](#) for further details.
2. **Network segment conflict:** Please verify that the designated network segment is not already in use.

Parameters
Parameters are defined in your template and allow you to input custom values when you create or update a stack.

::::: Your digiRunner Domain Name :::::

Domain
The ID of the Route53 Hosted Zone for the domain name used in the ACM Certificate.
Select AWS::Route53::HostedZone::id

SubDomain
Input your subdomain name for digiRunner, e.g. (subdomain).yourdomain.com
api

::::: Password for digiRunner login :::::

Password
Must be 8 to 12 characters and include upper and lower case letters, numbers, and special characters(@#\$!%*?&).

::::: Create VPC & Subnet :::::

new VPC CIDR
CIDR Block for the new VPC (e.g., 10.184.0.0/16)
10.184.0.0/16

Public_Subnet_1 CIDR
CIDR Block for the first public subnet (e.g., 10.184.1.0/16)
10.184.0.0/20

Public_Subnet_2 CIDR
CIDR Block for the second public subnet (e.g., 10.184.2.0/16)
10.184.16.0/20

Private_Subnet_1 CIDR
CIDR Block for the first private subnet (e.g., 10.184.3.0/16)
10.184.32.0/20

Private_Subnet_2 CIDR
CIDR Block for the second private subnet (e.g., 10.184.4.0/16)
10.184.48.0/20

::::: Test / Production :::::

Install for [Test / Production] Environment
The Test Environment will use cheaper machine instance type.
Select String

Select your domain

If there is no domain to select from, please refer to the "Prerequisite" section

Fill in your subdomain

If the subdomain is *api*, the digiRunner URL is *api.yourdomain*

Fill in your digiRunner login password

Must be 8~12 characters including uppercase and lowercase letters, numbers, and special characters (@#\$!%*?&)

Fill in the network segment of the new VPC

Fill in "Public subnet 1" in the new VPC

Fill in "Public subnet 2" in the new VPC

Fill in "Private subnet 1" in the new VPC

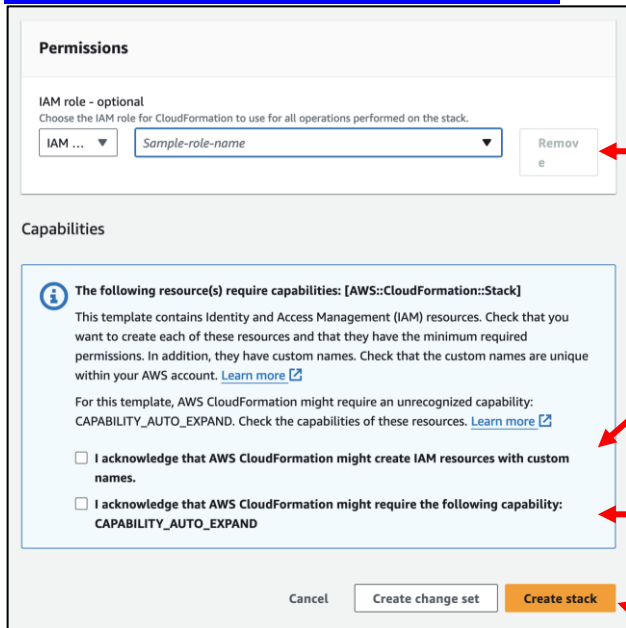

Fill in "Private subnet 2" in the new VPC

Select mode from Test / Production

Test mode will be installed with minimal resources and is not intended for official use.

3.3. Installation Permissions

The AWS account or IAM role performing the installation **must be granted [the least-privilege permissions required for digiRunner](#)**.

Select an IAM role with installation permissions

If your AWS account has administrator rights, you can skip this step.

Check to confirm that you acknowledge: The CloudFormation stack will autonomously establish the required IAM permissions.

Check to confirm that you acknowledge: The CloudFormation stacks are organized in a nested structure, with the root/parent stack creating nested stacks.

Click to initiate the installation

3.4. Installation Process

Nested-stacks

Root stack

Installation details, such as progress updates and the installation status, will be displayed in this section.

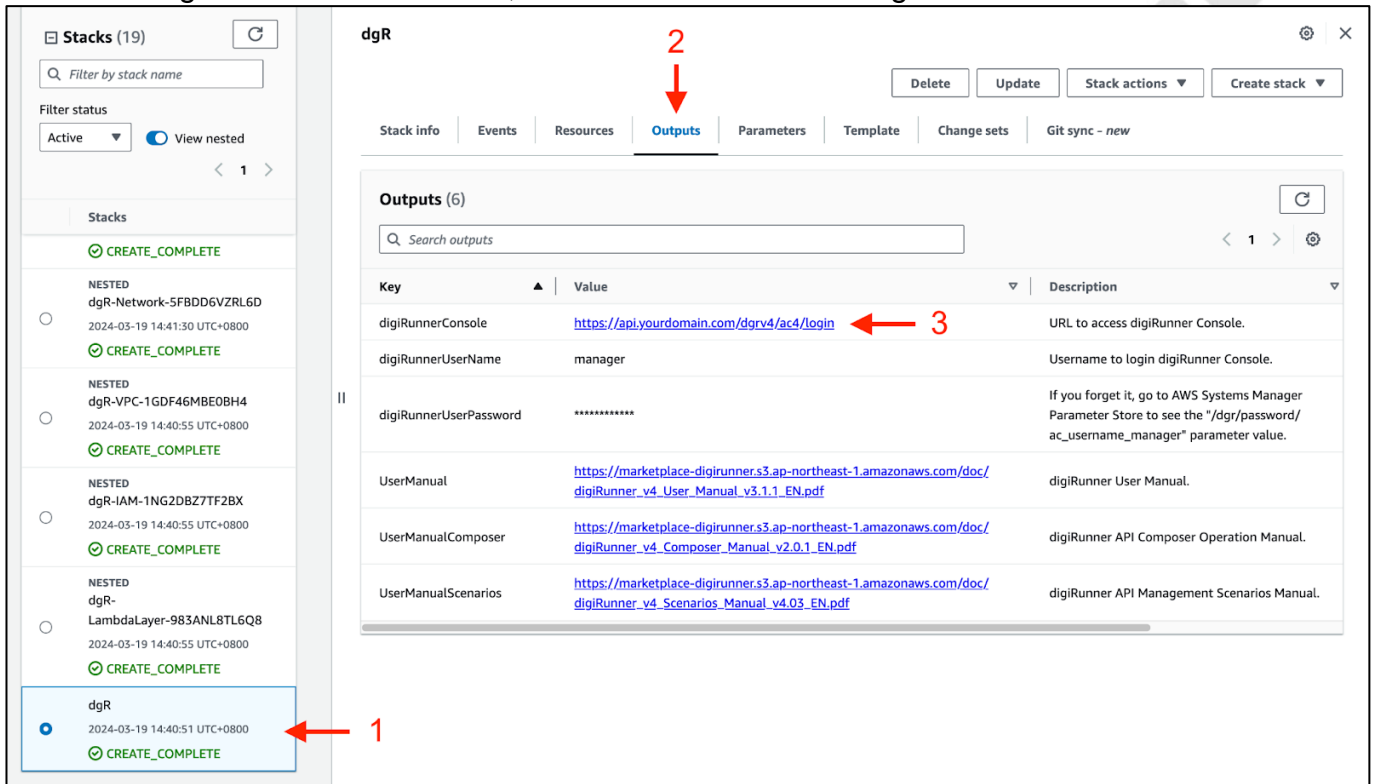

3.5. Completing Installation

The estimated installation times are as follows:

NOTE: Installation times may be longer than estimated if the AWS environment is unstable.

- **digRunner Lite:** about 25 minutes
- **digRunner Lite (High Availability):** about 35 minutes
- **digRunner Enterprise:** about 35 minutes
- **digRunner Enterprise (High Availability):** about 40 minutes

1. When the root stack shows 'CREATE_COMPLETE', indicating the installation is complete.
2. Click on **Outputs**.
3. Locate digiRunner Console URL, and click on the URL to log in.

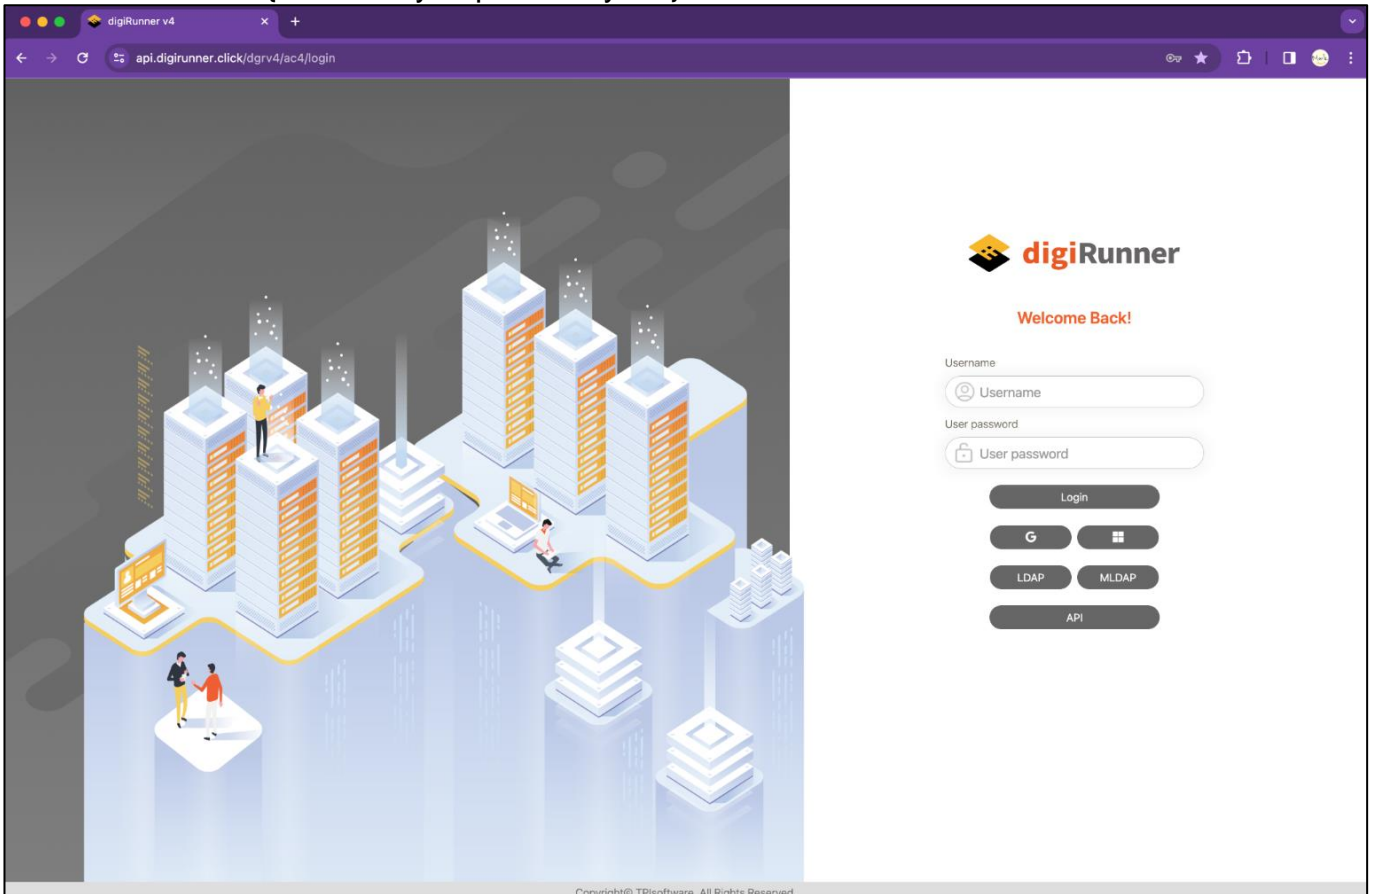

4. Refer to the table for digiRunner operation instructions.

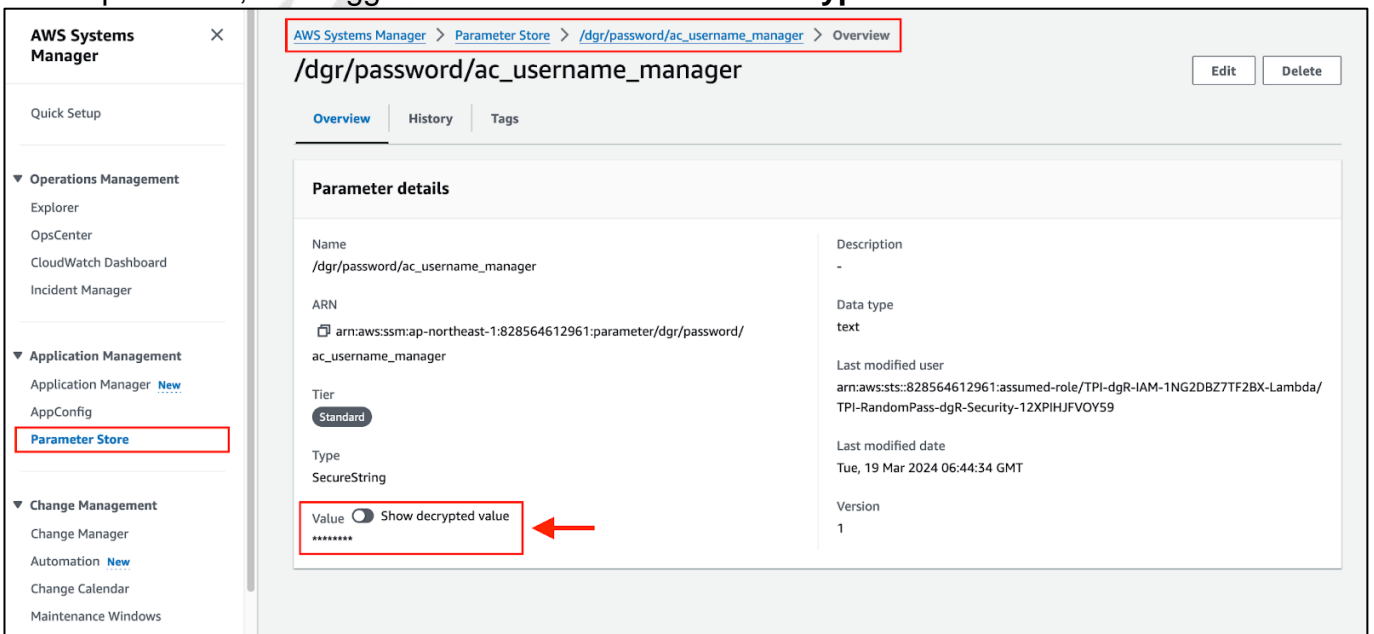

Manual Title	Key	Link
digiRunner User Manual	UserManual	https://marketplace-digirunner.s3.ap-northeast-1.amazonaws.com/doc/digiRunner_v4_User_Manual_v3.1.1_EN.pdf
digiRunner API Composer Operation Manual	UserManualComposer	https://marketplace-digirunner.s3.ap-northeast-1.amazonaws.com/doc/digiRunner_v4_Composer_Manual_v2.0.1_EN.pdf
digiRunner Scenarios Manual	UserManualScenarios	https://marketplace-digirunner.s3.ap-northeast-1.amazonaws.com/doc/digiRunner_v4_Scenarios_Manual_v4.03_EN.pdf

4. digiRunner Login

- Log in with the default username and password:
 - Username:** manager
 - Password:** {the value you previously set}

- If you forget the password, go to **AWS Systems Manager > Parameter Store > /dgr/password/ac_username_manager**. Under the **Overview** tab, find the **Value** field for the password, and toggle the switch to **Show the decrypted value**.

3. Click on **About** to view the version number of digiRunner.

The screenshot shows the 'About digiRunner' page. On the left is a navigation menu with items like 'AC User Management', 'Development Mode', 'Client Management', 'API Management', 'Monitor & Alert', 'Reports', 'Certificate Management', 'Application Forms', 'System Information', and 'System Configs'. The main content area displays the digiRunner logo, the version number **v4.0.49.1**, and system information: 'Enterprise_Lite Exp : 9999/12/31', 'Version : v4.0.49.1', and 'Account : AWSmarket'. In the top right corner, a user menu is visible with options for 'Profile', 'About' (highlighted with a red arrow), and 'Log out'.

4. If the **High Availability** solutions are installed, multiple **Containers** will be displayed on the **digiRunner Server** page; otherwise, only one Container will be shown.

The screenshot shows the 'digiRunner Server' page. The left navigation menu has 'digiRunner Server' highlighted with a red arrow. The main content area is divided into several sections:

- Summary Table:**

Users	1 / 0 / 0 (enabled / disabled / locked)
Roles	1
Clients	1 / 0 / 0 (enabled / disabled / locked)
Groups	1
Register APIs	0 / 0 (on / off)

7. Troubleshooting

If you had trouble installing the product, please uninstall first and refer to the following instructions to troubleshoot:

1. Ensure that at least one domain is registered or hosted on Route 53.
2. Ensure that the installation is performed using an AWS account with appropriate permissions (an Admin account is required).
3. Check if the VPC resource environment has reached its limit, such as the maximum number of VPCs being five or other restrictions. Refer to the [AWS documentation](#) for further details.
4. Confirm that the set password complies with the rules: Must be 8 to 12 characters and include upper and lower case letters, numbers, and special characters (@#\$!%*?&).
5. Ensure there are no conflicts between the configured subnet and existing subnets.
6. Ensure that all data entered during the installation process is accurately selected and filled out.
7. If the above issues have been ruled out, it may be an AWS system anomaly. Please try reinstalling.
